## **Kaltern's precious drinking water**

In line with our motto „Ecology never goes on vacation“, the municipality of Kaltern, as part of its commitment to climate protection, invites everyone operating in the tourism sector to raise their guests' awareness on environmental protection and especially on plastic and plastic waste reduction.

Let's protect our environment on holidays as well.

Did you know that Kaltern's running water boasts an excellent quality?

So it definitely pays off to stop buying expensive, in plastic bottled water, and start enjoying Kaltern's top quality water, which can be found also at its many different public fountains.

### **From the origins to the final consumer**

Kaltern's drinking water comes from different sources and wells and gets to the final consumer through a modern water delivery network. As prescribed by South Tyrol's current regulations, the ducts are subject to regular checks and are continuously monitored. Indeed, the local health services frequently take water samples, which are then analysed by the biological laboratories.

### **Kaltern's drinking water quality**

Kaltern's drinking water undergoes regular checks - from its origins up to the final consumer.

Its quality is determined by the evaluation of different parameters, that influence the water's composition and, as a consequence, can potentially compromise its drinkability. Regular checks and monitoring ensure a pure and high-quality drinking water. The results obtained from the different tests give us an overview of Kaltern's high-quality water. For everyone interested, the results can be found online on the webpage of the autonomous province of Bolzano: <https://umwelt.provinz.bz.it/wasser/wasserqualitaettrinkwasserleitungen-suedtirol.asp>

### **Drinking water and public fountains**

Even at the 49 public fountains, spread throughout the municipal area of Caldaro, you can safely drink and taste the excellent local water, as even these fountains are subject to regular checks.
